MODULE HANDOVER

# HR Portal

Flows, Features & Technical Reference — 2B Environmental

Employees · Documents · Announcements · Calendar · Incidents · Assessments · PTO · Reviews

| | |
|---|---|
| DOCUMENT | HR Portal Handover (flows & explanation) |
| PREPARED | 16 October 2026 |
| AUDIENCE | HR admins & incoming engineers |
| SCOPE | The entire HR Portal — admin back office + employee portal |

# Contents

**1.** HR Portal Overview

**2.** Roles & Permissions

**3.** Employee Authentication (Portal Login)

**4.** Employees (HR Management & Onboarding)

**5.** Quarterly Assessment (new)

**6.** Paid Time Off — PTO (new)

**7.** Document Management & E-Signature

**8.** Announcements

**9.** Community Calendar

**10.** Incident Reports

**11.** Company Google Reviews (new)

**12.** Notifications (Bell & Email)

**13.** Activity Log (Audit Trail)

**14.** Scheduled Jobs

**15.** Data Model & File Storage

**16.** Deployment Notes

# 1. HR Portal Overview

The HR Portal is the people-management side of the 2B Environmental platform. It has two faces that share one `users` table and one login system:

| Side | Who uses it | What they do |
|---|---|---|
| **Admin back office** (the "HR Portal" cards on the dashboard) | Office staff / managers (any non-employee role) | Manage employee accounts, documents, announcements, the team calendar, incident reports, quarterly assessments, PTO, and Google reviews. |
| **Employee Portal** (public site, employee login) | Field crew / employees (role = `employee`) | Log in to see their documents (read & sign), announcements, calendar, reviews, their PTO balance, submit incident reports, manage their profile. |

An "employee" is simply a `User` whose role slug is `employee`. The same email/password works only on the correct side — the system blocks an employee from the admin login and vice-versa.

> **NEW IN THIS RELEASE**
> Three HR modules were added: **Quarterly Assessment** (§5), **PTO tracking** (§6), and **Company Google Reviews** (§11). They are marked NEW throughout.

# 2. Roles & Permissions

Every admin HR screen is protected by a granular permission (slug = `module.action`). A role either holds a permission or it doesn't; the `superadmin` role holds everything. The HR Portal dashboard cards only appear for modules the logged-in user can `view`.

| Module | Permissions used |
|---|---|
| Employees | `employees.view / create / edit / delete` (assessment & PTO actions use `employees.edit`) |
| Documents & folders | `documents.*`, `document-categories.*` |
| Announcements | `announcements.*` |
| Incident Reports | `incident-reports.*` |
| Community Calendar | `calendar.*` |

Roles & permissions themselves are managed under User Management (Roles / Users / Permissions) — outside the HR Portal but controlling access to it.

# 3. Employee Authentication (Portal Login)

Employees log in on the public site, not the admin panel. Authentication uses Laravel's standard session guard; the role slug keeps the two worlds separate.

**LOGIN FLOW**

**1.** Employee opens the portal and clicks **Employee Login** → **2.** enters email + password → **3.** system verifies they hold the `employee` role and are active (else logged back out with a message) → **4.** session starts and a password-hash fingerprint is stored → **5.** redirected to their Dashboard.

- **Forced re-login on password change:** the `EmployeeAuth` middleware compares the stored fingerprint to the current password hash on every request — if an admin (or the employee) changes the password elsewhere, other sessions are logged out automatically.
- **Forgot password:** a proper tokenised reset — employee requests a link, receives an email, sets a new password. The reset link points to the employee-portal reset page (not the admin one).
- **Key routes:** `frontend.employee_login`, `…_authenticate`, `…_forgot_password`, `…_send_reset_link`, `…_reset_password`, `…_logout`.

# 4. Employees (HR Management & Onboarding)

Where admins create and manage the people who can access the Employee Portal. Each employee is a `User` with the `employee` role assigned automatically.

## 4.1 Admin flow — create & onboard

**ONBOARDING FLOW**

**1.** Admin → **Employees → New Employee** → enters name, email, start date, eligibility, and a password → **2.** account is created with the employee role → **3.** a **welcome email with the login credentials** is sent automatically → **4.** the "welcome sent" date is stamped so it's never sent twice.

- **Mail safety:** if the welcome email fails to send, the account is still created and flagged "welcome pending." On the next edit, if a new password is entered, the welcome email is retried (passwords are hashed and can't be re-read, so a fresh password is required to resend credentials).
- **Edit** lets admins update name/email/status, set a new password, toggle **PTO eligibility**, set the **start date**, record **quarterly assessments**, and manage **PTO** (see §5–§6). It also lists the employee's signed documents.
- **Delete** is a soft delete (recoverable).
- **List view** shows each person's status, quarterly-assessment status, and PTO remaining at a glance.

| Action | Route name |
|---|---|
| List / Create / Store | `admin.employees.index / create / store` |
| Edit / Update / Delete | `admin.employees.edit / update / destroy` |
| Record assessment / PTO entry | `admin.employees.complete-assessment`, `admin.employees.pto.store` |

# 5. Quarterly Assessment NEW

Tracks when each employee is due for their 90-day review and reminds admins automatically.

### 5.1 How it works

- The admin sets the employee's **Start Date** (hire date).
- The system counts **90 days** from the start date (or from the last completed assessment) to compute the **next-due date**.
- It recurs: every completed assessment schedules the next one 90 days later.

> **ASSESSMENT FLOW**
> **1.** Admin sets Start Date → **2.** at 90 days the employee becomes **Due** → **3.** a daily job notifies all admins (dashboard bell + email) → **4.** admin opens the employee, clicks **Mark Completed** (optional notes) → **5.** it's logged in the history and the next due date resets to +90 days.

- **Where to see it:** a "Due / On track / Completed" status column on the Employees list, and a full status + history card on each employee's edit page.
- **Reminders:** the `assessments:check-due` command runs daily (9 AM Honolulu); it notifies **once per cycle** (no daily spam) and re-arms when an assessment is completed. Admins get both a dashboard bell notification and an email (branded template).

## 6. Paid Time Off — PTO NEW

A simple, admin-maintained PTO tracker **in days**. The app shows each employee their allotment, days used (with dates), and remaining — counting down from the full year's amount so balances never look alarmingly negative.

> **IMPORTANT — SOURCE OF TRUTH**
> Payroll remains the official record and still calculates accrual. This module is a **clear visibility tool** for the crew; it does **not** calculate accrual, run payroll, or compute termination payouts.

### 6.1 How it works

> **PTO FLOW**
> **1.** Admin marks the employee **PTO-eligible** → **2.** adds an **Annual allotment** entry (e.g. 27 / 16 / 11 days) at the start of the year → **3.** as the employee takes time off, admin logs a **PTO used** entry (date + days, half-days allowed) → **4.** the app shows **Allotted / Used / Remaining** → **5.** at year-end, up to **5 days** can be carried over (entered as a "Carried over" entry in the new year).

| Entry type | Effect | Example |
|---|---|---|
| Annual allotment | adds the year's days (+) | +27 days on Jan 1 |
| Carried over | adds prior-year days, max 5 (+) | +3 days carried from last year |
| PTO used | subtracts a day/part-day, dated (−) | −1 day (vacation), −0.5 (half day) |
| Adjustment | manual correction (+/−) | ±X with a note |

- **Admin view:** on the employee edit page — an *Allotted / Used / Remaining* summary, an "Add PTO entry" form, and a full dated history. The Employees list also shows each person's remaining days.

- **Employee view:** a "My Paid Time Off" card on their dashboard showing remaining / allotted / used plus the dates they've taken — read-only, with a note that the paystub is the official record. If nothing is set yet, it shows a friendly "not assigned yet" / "not enrolled" status.
- **Everything is admin-entered** (no employee request workflow in this version); the balance is the signed sum of all entries, so every change is auditable.

# 7. Document Management & E-Signature

Admins upload documents into folders and either publish them company-wide or assign them to specific employees. Some documents require a mandatory "read & sign," which produces a signed certificate.

## 7.1 Admin flow

- Create **folders** (categories), then upload **documents** into them.
- A document is either **public** (everyone) or **personal** (assigned to chosen employees).
- A personal PDF can be marked **"requires acknowledgment"** with a due date — the employee must read & sign it.
- Compliance screens: a **Sign-offs dashboard** (who still needs to sign) and a per-document **Acknowledgments** view (signed vs pending), with downloadable certificates.

## 7.2 Employee read-and-sign flow

> **READ & SIGN FLOW**
> **1.** Employee sees the document under "Action Required" → **2.** opens the **read & sign** screen → **3.** types their name & ticks agree → **4.** the system generates a **Certificate of Acknowledgment PDF** (name, IP, timestamp), records the signature, notifies admins, and unlocks the original file for download.

> **HOW "SIGNING" WORKS**
> The typed name is the signature. The system renders a separate **certificate PDF** (preferring headless Chrome for crisp output, falling back to the built-in PDF engine). The original file stays locked until the employee has signed. Read-and-sign is limited to **personal PDF** documents.

# 8. Announcements

- Admins post company news with an optional image and publish date. Each announcement has a unique URL slug.
- **Employee side:** announcements are viewable by everyone (even logged-out) on the portal; the 3 latest also appear on the employee dashboard.
- **Routes:** admin `admin.announcements.*`; public `frontend.employee_announcements` / `…_announcement`.

# 9. Community Calendar

- Admins add events (title, dates, all-day or timed, category, location, optional flyer attachment). Categories are colour-coded (Holiday, Meeting, Training, PTO, Other).
- The calendar is rendered by FullCalendar, fed by a JSON events endpoint; all-day vs timed events are handled correctly, with soft category colours.
- **Employee side:** a read-only calendar of upcoming events on the portal.
- **Routes:** admin `admin.community-calendar.*` (incl. `…events`); public `frontend.employee_calendar` / `…_events`.

# 10. Incident Reports

Workplace-incident reporting, filed by employees from the portal or by managers on their behalf.

## 10.1 Flows

**EMPLOYEE-FILED**

**1.** Employee → **Report an Incident** → fills date, time, location, category, description, and attaches up to 6 photos + 4 videos → **2.** gets a reference number ( `IR-YEAR-####` ) and a thank-you page → **3.** all admins are notified.

**ADMIN REVIEW**

**1.** Admin opens the report → **2.** reviews details/media → **3.** changes status (**Open → Under Review → Closed**), adds review notes → **4.** the reporter/involved employee is notified of the status change.

- **Permissions & scope:** managers (holders of `incident-reports.edit`) see and manage all reports; a regular employee sees only their own.
- **Extras:** list filters + year dropdown, CSV export, per-photo delete. Media (photos and videos) are stored together and kept on disk even if a report is soft-deleted.

# 11. Company Google Reviews NEW

Shows the company's Google Business Profile reviews inside the Employee Portal so the crew can see what customers are saying.

**DATA FLOW**

**1.** A daily job pulls reviews from Google → **2.** stores them locally → **3.** the portal's **Reviews** page shows the overall rating, each review (name, stars, date, comment), and any owner replies.

**STATUS — GO-LIVE PENDING**

The page and the whole sync pipeline are built and **currently show sample reviews**. Going live needs the client to grant Google Business Profile access and Google to approve API access; then 5 credentials are added to the config and the daily sync replaces the samples with real reviews — **no code change required**.

**Routes:** employee page `frontend.employee_reviews` ( `/company-reviews` ). Commands: `reviews:sync` (daily), `reviews:seed-sample` (loads previews).

## 12. Notifications (Bell & Email)

Both the admin header and the employee header have a **notification bell** with unread counts and live pop-up toasts (polled every few seconds). The same system sends emails where relevant.

| When | Who is notified | Channel |
|---|---|---|
| Employee submits an incident report | All admins | Bell |
| Manager files/updates an incident for an employee | The affected employee | Bell |
| Employee signs a document | All admins | Bell |
| Document shared/assigned to an employee | That employee | Bell |
| Employee becomes due for a quarterly assessment NEW | All admins | Bell + Email |

## 13. Activity Log (Audit Trail)

- Create / update / delete / restore actions on key HR records (employees, documents, announcements, incident reports, calendar events, roles, permissions) are recorded automatically with the acting user, time, and what changed.
- Login / logout and document-signing events are also logged.
- The admin Activity Log is split into **HR** and **Forms** views, each with module/user/date filters.
  - Note: operations run from the command line (migrations, scheduled jobs) are intentionally not logged.

## 14. Scheduled Jobs

| Command | When | What it does |
|---|---|---|
| `assessments:check-due` NEW | Daily, 9 AM Honolulu | Notifies admins (bell + email) of employees due for a quarterly assessment. |
| `reviews:sync` NEW | Daily, 6 AM Honolulu | Pulls Google reviews (no-op until credentials are configured). |
| `email:monthly-report-reminder` | Last day of month, 9 AM | (Operations) monthly pumping-report reminder. |

> **REQUIRES SERVER CRON**
> These run only if the server has the Laravel scheduler active: `* * * * * php artisan schedule:run`. Without it, the assessment and review jobs will not fire.

## 15. Data Model & File Storage

| Table | Holds |
|---|---|

| | |
|---|---|
| `users` | Staff + employees. HR fields include `start_date`, `accrues_pto`, `last_assessment_at`, `welcome_email_sent_at`. |
| `quarterly_assessments` NEW | Each completed 90-day assessment (date, who recorded it, notes). |
| `pto_ledger_entries` NEW | PTO history in days (allotment / carryover / usage / adjustment). |
| `document_categories` / `documents` / `document_user` / `document_acknowledgments` | Folders, files, per-employee assignment, signature certificates. |
| `announcements` | Company announcements. |
| `calendar_events` | Team calendar events. |
| `incident_reports` / `incident_report_photos` | Incident reports + their photos/videos. |
| `google_reviews` NEW | Synced Google reviews. |
| `admin_notifications` | In-app notifications (admin + employee). |
| `activity_logs` | Audit trail. |

**File storage:** uploaded files (documents, signed certificates, avatars, incident photos/videos, announcement images, calendar flyers) live under `public/uploads/…`. Soft-deleting a record keeps its files unless the screen explicitly removes them.

## 16. Deployment Notes

1. **Database:** the new HR tables/columns (quarterly assessments, PTO, Google reviews, plus the new `users` columns) must be applied. On this project a plain `artisan migrate` is out of sync, so apply them via `migrate --path=…` per migration or the supplied raw SQL.
2. **Server cron** must run `schedule:run` every minute for the assessment/review jobs.
3. **Google Reviews:** fill the 5 credential values once the client grants access & Google approves; until then the portal shows sample reviews (load with `reviews:seed-sample`).
4. **PTO:** create the crew's employee accounts, then enter each one's annual allotment to start tracking.
5. **Mail:** SMTP must be configured for welcome emails, document/assessment notifications, and password resets.

---

End of HR Portal handover. This document describes behaviour and flows; exact field-level logic lives in the respective controllers, models, and Blade views (Employees, Documents, Announcements, Incident Reports, Calendar, plus the new Quarterly-Assessment, PTO, and Google-Reviews code).
