USER GUIDE

2B Environmental

How Each Module Works — a Plain-English Guide

For office staff & managers · No technical knowledge needed

DOCUMENT	Admin User Guide & Process Flows
AUDIENCE	Owners, managers, office staff
COVERS	Every module: what it does, how to use it, how to change it
PREPARED	October 2026

What's inside

Each module is explained the same way: **What it's for → Where to find it → How to use it (step by step) → How to make changes → Tips.**

GETTING STARTED

Logging in & the Dashboard

Finding your way around

PART A — OPERATIONS (FIELD RECORDS)

1. Waste Disposal (Disposal Details)
2. Cesspool Records
3. Septic Records

PART B — HR PORTAL

4. Employees
5. Quarterly Assessments (90-day check-ins)
6. PTO (Paid Time Off)
7. Documents (folders & read-and-sign)
8. Announcements
9. Community Calendar
10. Incident Reports
11. Google Reviews

PART C — ADMINISTRATION

12. User Management (Roles, Users, Permissions)
13. Email Settings
14. Activity Log
15. Notifications

GETTING STARTED

Logging in & the Dashboard

The admin area is where your office staff manage everything. Employees have their own separate portal (covered where relevant).

1. Open the admin web address and enter your **email** and **password**.
2. You land on the **Dashboard** — a quick overview split into two groups of cards:
   - **Operations** — Cesspool, Septic, and Wastewater totals.
   - **HR Portal** — Employees, Documents, Announcements, Incident Reports, Community Calendar (each shows a quick count).
3. Click any card to jump straight into that module. Below the cards, **Quick Actions** let you log a disposal or generate the monthly report.

> **GOOD TO KNOW**
>
> What you see depends on your **permissions**. If a menu item or card is missing, your role may not have access — an owner can grant it under User Management (module 12).

Finding your way around

- The **left sidebar** is your main menu. The **bell icon** (top-right) shows notifications; the **profile menu** has logout.
- Most list screens have a **search box**, **filters** (date range, status), and action buttons (Edit, Delete, Export).
- Green "success" messages appear briefly at the top-right after you save something.

PART A — OPERATIONS (FIELD RECORDS)

1. Waste Disposal (Disposal Details)

WHAT IT'S FOR

Keeps a record of every waste pickup & haul, and produces the official County of Hawai'i monthly report.

Where: Sidebar → **Disposal Details**. New records are created by the public intake form (drivers fill it in the field); the office reviews them here.

HOW IT WORKS

1. A driver/field user fills the public **Log Waste Disposal** form — date, generator, waste type, address, volume, discharge site, vehicle, etc.
2. The record appears automatically in the **Disposal Details** list (and admins get a bell notification).
3. Use the **date / year filters** to narrow the list.
4. To export: tick the rows you want and click **Export PDF** (one record = one PDF; several = a zip), or **Export CSV** for a spreadsheet.
5. For the County report: click **Generate Monthly Report** (also on the Dashboard), pick the month/year, fill the permit/registration/signature fields, and download the official PDF.

TO MAKE CHANGES

Records come from the field form, so the office mainly reviews and exports. You can **delete** a record (it's kept recoverable, not erased). To change what the field form asks, that's a developer change to the public form.

2. Cesspool Records

WHAT IT'S FOR

Stores cesspool inspection reports submitted from the field, with photos, video and the inspector's signature.

Where: Sidebar → **Cesspool Records**.

HOW IT WORKS

1. An inspector fills the public **Cesspool** form in the field. They can **save a draft** (kept for 1 hour) and finish later.
2. Submitted reports show in the list; filter by **date** or **draft/submitted** status.
3. Click **Edit** to review a report, add or replace the **photo/video/signature**, and correct details.
4. Click **PDF** to download the inspection report, or **Send Report** to email the PDF to one or more recipients.

TO MAKE CHANGES

Open a record → **Edit** → change fields or swap media → Save. Deleting a record keeps it recoverable; the uploaded files stay on the server.

3. Septic Records

WHAT IT'S FOR

Same as Cesspool Records, but for septic-tank inspections.

> **Where:** Sidebar → **Septic Records**.

It works exactly like Cesspool Records: field form (with draft save) → review/edit in the office → PDF download or email. The only difference is the septic email report goes to a **single** recipient (cesspool allows several).

PART B — HR PORTAL

4. Employees

WHAT IT'S FOR

Creates and manages the login accounts your crew use for the **Employee Portal** (documents, announcements, incident reports, their PTO, etc.).

> **Where:** Sidebar → HR Portal → **Employees**.

HOW TO ADD AN EMPLOYEE

1. Click **+ New Employee**.
2. Enter their **name, email**, and a **password**, and set the account **Active**.
3. Save. The system automatically **emails them a welcome message with their login details**.

HOW TO EDIT AN EMPLOYEE

1. Click **Edit** on their row. Here you can update name, email, active status, **Start Date**, **Accrues PTO** (eligibility), and reset their password.
2. The edit page also shows their **Quarterly Assessment** status, their **PTO** balance & history, and any **documents they've signed**.

> **WELCOME EMAIL**
> If the welcome email didn't send (e.g. a mail hiccup), the edit page shows "Welcome email pending" — just set a new password and save to send it again. It's only ever sent once successfully.

5. Quarterly Assessments (90-day check-ins)

WHAT IT'S FOR

Reminds you when each employee is due for their 90-day review, and keeps a record of completed assessments.

Where: On each employee's **Edit** page, and the **PTO/Assessment columns** on the Employees list.

HOW IT WORKS

1. Set the employee's **Start Date** (their hire date) and save.
2. The system counts **90 days** and works out the next-due date automatically.
3. When someone becomes due, **all admins are notified** on the dashboard bell **and by email** (a daily check runs in the background).
4. After you do the review, open their edit page and click **Mark Completed** (add a note if you like). The next one is then scheduled 90 days later.

TO MAKE CHANGES

Change the **Start Date** to shift the schedule. The Employees list shows each person as **Due** or **On track** at a glance, with their last-completed date.

6. PTO (Paid Time Off)

WHAT IT'S FOR

A simple, days-based view of each employee's PTO for the year — so the crew can see what they have left. **Your payroll stays the official record;** this is just an easy reference that always counts down (no scary negative numbers).

Where: On each employee's **Edit** page (full management); a quick **PTO column** on the Employees list; and the employee's own **Dashboard** in their portal.

HOW TO SET IT UP FOR A PERSON (ONCE A YEAR)

1. Open the employee's **Edit** page and make sure **Accrues PTO** is on.
2. In the PTO section, click **Add PTO entry** → choose **Annual allotment** → enter their days for the year (e.g. 27, 16, or 11) → Save.
3. If they carried days from last year, add another entry → **Carried over** (up to 5 days).

HOW TO LOG TIME OFF

1. Click **Add PTO entry** → choose **PTO used**.
2. Enter the number of **days** (use 0.5 for a half day) and the **date** they took off, then Save.
3. The **Remaining** number updates instantly, and the employee sees it on their own dashboard with the dates listed.

TO MAKE CHANGES

Use **Adjustment** (with + or −) to correct a balance. Every entry is listed with its date and who entered it, so nothing is hidden. Up to **5 days** may carry to next year — you add that as a "Carried over" entry in January.

NOT ELIGIBLE?

Turn off **Accrues PTO** for anyone who doesn't get PTO (temporary/part-time). Their portal simply shows "not currently enrolled in PTO."

7. Documents (folders & read-and-sign)

WHAT IT'S FOR

Shares company documents with staff — either openly, or assigned to specific people, with an optional **mandatory "read & sign"** that records a signed certificate.

Where: Sidebar → HR Portal → **Documents** (and **Document Categories** for the folders).

HOW TO SHARE A DOCUMENT

1. First make a **folder** (Document Categories → add, e.g. "Policies", "Safety").
2. Go to **Documents** → add a document, give it a title, pick the folder, and upload the file.
3. Choose who sees it: **Public** (everyone) or assign it to **specific employees**.
4. (Optional) For a PDF assigned to people, tick **require read & sign** and set a due date.

WHAT THE EMPLOYEE DOES

1. In their portal's **Document Library**, they open the document. If it needs signing, they must **read it and type their name to sign** before they can download it.
2. Signing creates a dated **certificate** (with their name, time, and IP) that you can download.

TO TRACK & CHANGE

The **Signed Documents** / acknowledgments view shows who has signed and who's still pending. Replace a file by editing the document; a folder can't be deleted while it still has documents in it.

8. Announcements

WHAT IT'S FOR

Posts company news/updates that employees see in their portal.

Where: Sidebar → HR Portal → **Announcements**.

1. Click add, give it a **title** and **message**, optionally an **image**, set it **Active**, and a publish date.
2. Save — it immediately appears on the employee portal (the 3 latest also show on their dashboard).

TO MAKE CHANGES

Edit to update the text/image, or turn **Active** off to hide it without deleting. Deleting removes it from the portal.

9. Community Calendar

WHAT IT'S FOR

A shared calendar of company events (holidays, meetings, training, PTO, etc.) employees can view.

Where: Sidebar → HR Portal → **Community Calendar**.

1. Click a day or "add event", enter a **title**, **date(s)**, pick a **category** (each has its own colour), add a location, and optionally attach a flyer.
2. Save — it shows on the calendar for staff and on the employees' portal calendar.

TO MAKE CHANGES

Click an event to edit or delete it. Categories/colours are fixed (Holiday, Meeting, Training, PTO, Other).

10. Incident Reports

WHAT IT'S FOR

Records workplace incidents — filed by employees from their portal, or by a manager on their behalf — and tracks each through to closed.

Where: Sidebar → HR Portal → **Incident Reports**.

HOW IT WORKS

1. An employee submits a report from their portal (date, location, category, description, and up to 6 photos + 4 videos). Managers are notified.
2. Each report gets a reference number automatically (e.g. `IR-2026-0008`).
3. Managers open it, review, set the **status** (Open → Under Review → Closed), and add review notes. The affected employee is notified of status changes.
4. Use the filters + **Export CSV** for reporting.

TO MAKE CHANGES

Only managers (with the right permission) can edit/close reports. Deleting keeps the record recoverable and keeps the photos.

11. Google Reviews

WHAT IT'S FOR

Shows your company's Google reviews inside the employee portal, so the crew can see what customers are saying.

Where: Employee portal → **Reviews** page (rating summary + review cards).

STATUS

The page is built and currently shows **sample reviews** so you can see the layout. It switches to your **real, live Google reviews** once your Google Business Profile is connected (this needs you to grant access and Google to approve it — a one-time setup).

> **TO GO LIVE**
>
> Add our team as a **Manager** on your Google Business listing and allow the one-time setup. After that, reviews update automatically every day — nothing for you to maintain.

PART C — ADMINISTRATION

12. User Management (Roles, Users, Permissions)

WHAT IT'S FOR

Controls **who can log into the admin area** and **what they're allowed to do**. (This is for office/staff accounts — employees are managed separately under Employees.)

Where: Sidebar → User Management → **Roles**, **Users**, **Permissions**.

THE THREE PIECES

- **Roles** — job types like "Manager" or "Office Staff". Create a role, mark it active.
- **Permissions** — a grid where you tick, **per role**, exactly what that role can see and do (view/create/edit/delete for each module).
- **Users** — the actual staff logins. Create a user, set a password, and assign them a **role**.

HOW TO GIVE SOMEONE ACCESS

1. Make sure a suitable **Role** exists (e.g. "Manager").
2. In **Permissions**, open that role and tick what it may do, then save.
3. In **Users**, create the person's login and assign them that role.

> **SAFETY RULES BUILT IN**
>
> The **Superadmin** role always has full access and is protected (can't be deleted or locked out). You can't delete your own account or the last superadmin. A deactivated user (or role) immediately loses access.

13. Email Settings

WHAT IT'S FOR

Sets which email addresses receive the **monthly report reminder** (the nudge to generate the County disposal report).

Where: Sidebar → **Email Setting**.

1. Add/edit the recipient addresses (a default plus up to three more).
2. On the last day of each month (9 AM Hawai'i time), the system emails those addresses a reminder automatically.

TO MAKE CHANGES

Edit the record to change the recipients. (For the reminder to actually send, the server's scheduled task must be running — your developer/host sets that up once.)

14. Activity Log

WHAT IT'S FOR

An automatic record of who did what — created, edited, deleted — across the system. Great for accountability and tracing a change.

Where: Sidebar → **Activity Log** (split into **Forms** and **HR** views).

1. Open the log and use the filters (module, action, person, text, date range) to find what you're looking for.
2. Click a row for the details of that change.

GOOD TO KNOW

The log is written automatically — there's nothing to maintain. It records the person, time, and what changed.

15. Notifications

WHAT IT'S FOR

Keeps you informed in real time — new field submissions, incident reports, document sign-offs, and assessment-due reminders.

Where: The **bell icon** (top-right of every page) and the full **Notifications** page.

1. A red number on the bell shows unread notifications; a pop-up also appears when something new arrives.
2. Click a notification to jump straight to the item, or use **Mark all read**.

GOOD TO KNOW

Notifications are generated automatically by the system — no setup needed. Employees have their own bell in their portal too.

This guide describes how the modules work for everyday use. For wording, extra fields, or behaviour changes, your developer can update the relevant module — share this guide so everyone references the same process. Employee-facing screens (portal) mirror the admin data described here.
